

Agility is defined as the ability of a project team to respond rapidly to a change.

False

How is plan driven development different from agile development ?

Iteration occurs within activities.

Agile methods seem to work best when team members have a relatively high skill level.

True

Which of the following does not apply to agility to a software process?

Eliminate the use of project planning and testing

Which three framework activities are present in Adaptive Software Development(ASD) ?

speculation, collaboration, learning

In agile development it is more important to build software that meets the customers' needs today than worry about features that might be needed in the future.

True

Agile Software Development is based on

Both Incremental and Iterative Development

Select the option that suits the Manifesto for Agile Software Development

- a) Individuals and interactions
- b) Working software
- c) Customer collaboration
- d) All of the mentioned

What is the disadvantage of Agile Methodology?

In agile methodology, documentation and designing take a back seat.

What is the different types of Agile Methodologies?

Scrum

DSDM

FDD

All of the above

there is at least tiny difference between incremental and iterative development

true

The scrum approach originated with agile software development as practitioners looked for ways to

improve communication

increase throughput

Although Scrum was intended for management of software development projects, it can be used to run software maintenance teams, or as a general project/program management approach.

True

Scrum eliminates many of the tasks required of a lead because teams become self-organizing.

True

In scrum the team activity is monitored and coordinated on ..... basis.

daily

Scrum is iterative. The iteration is called .....

sprint

The ..... is responsible for maximizing return on investment (ROI) by identifying product features, translating these into a prioritized feature list, deciding which should be at the top of the list for the next Sprint, and continually re-prioritizing and refining the list.

Product Owner

The team in Scrum is seven plus or minus two people.

True

The ScrumMaster and the Product Owner can be the same individual.

False

The first step in Scrum is for the Product Owner to articulate the product vision. Eventually, this evolves into a refined and prioritized list of features called the Product Backlog

The team meets daily for ..... minutes, where each member of the team discusses the work they've completed since the last meeting

15

are of scrum principles.

- A) Time-boxes
- B) Cross-functional teams
- C) Open communications within team.
- D) All of above

Users & Stakeholders in scrum are Interested in results but not responsible for deliverables.

False

Scrum was formalized over a decade ago by ..... and it's now being used by companies large and small.

Ken Schwaber

Dr. Jeff Sutherland

included in SRS(black-box specification)?

Design Constraints

Some of the agile frameworks are -

Scrum & Kanban

Test Driven Development

Feature Driven Development

All of the above

What are the responsibilities of the Scrum Master?

- Tracking and monitoring project development
- Work to obtain the project properly
- Improving the performance of the team
- All of the above

Which of the following is responsible for sprint meeting?

Scrum master

There are ..... phases in Scrum

3

is not an agile method.

4GT

Which of the following is not an Agile methodology?

PMBOK® 3

Which of the following is the best approach for running an effective workshop?

Facilitation

What does an Agile approach value?

People over process

What does a burn-down chart show?

The progress of the work and features completed.

Which of the following is the working culture of an Agile team?

Collaborative
