Model - 1

أولاً - الأسئلة

1. The _____ breakpoint **stops execution only when the set condition is true**
   A) normal   B) stack   C) conditional

2. The CMM _____ level is characterized by AD HOC عشوائي activities (organization is not planned in advance.)
   A) Initial   B) Defined   C) Optimized

3. _____ testing **ignores** the **internal** code of a system or component and focuses solely on the **outputs**
   A) White   B) Black   C) Green

4. When _____ value is **0**, then **all** application **pages** are **static**
   A) Customization index   B) Breakpoint   C) minification

5. _____ is a **client side session** management technique.
   A) In-Memory storage   B) Cookie   C) Database Storage

ثانيا - إجابات الطالب

برجاء كتابة الحرف الممثل للإجابة التي تود اختيارها تحت رقم السؤال

Question	1	2	3	4	5
Answer (a,b,c,d)					

Model - 2

1. _____ is a client side session management technique
   A) In-Memory storage
   B) Cookie
   C) Database Storage

2. The_____ breakpoint stops execution only when the set condition is true
   A) normal
   B) stack
   C) conditional

3. When_____ value is 0, then all application pages are static
   A) Customization index
   B) Breakpoint
   C) minification

4. _____ testing ignores the internal code of a system or component and focuses solely on the outputs
   A) White
   B) Black
   C) Green

5. The CMM_____ level is characterized by AD HOC علوائي activities (organization is not planned in advance.)
   A) Initial
   B) Defined
   C) Optimized

Question	1	2	3	4	5
Answer	B	C	A	B	A

Model - 3

نمنinspect

أولاً - الأسئلة

_____ Testing is to check project documentation of software models and code **without running** the project in runtime.
 A) Dynamic ● Static C) Acceptance

The _____ is a problem (Bug) that is uncovered **after delivery** to the **end-user**
 A) Error ● Defect C) CMM

When **Customization index** value is **1**, then **all** application **pages** are _____
 A) static ● dynamic C) hidden

4. _____ is the process of **removing** all **unnecessary characters** from **JavaScript** source code **without** altering its functionality
 ● Minification B) Initialization C) Debugging

5. _____ is a **server side session** management technique.
 A) browser storage B) Cookie ● Database Storage

Model - 4

1. _____ is the process of removing all unnecessary characters from JavaScript source code without altering its functionality
   A) Minification   B) Initialization   C) Debugging

2. _____ is a server side session management technique.
   A) browser storage   B) Cookie   C) Database Storage

3. _____ Testing is to check project documentation of software models and code without running the project in runtime.
   A) Dynamic   B) Static   C) Acceptance

4. When Customization index value is 0, then all application pages are _____
   A) static   B) dynamic   C) hidden

5. The _____ is a problem (Bug) that is uncovered after delivery to the end-user
   A) Error   B) Defect   C) CMM

ثانياً - إجابات الطالب

برجاء كتابة الحرف الممثل للإجابة التي تود اختيارها تحت رقم السؤال

Question	1	2	3	4	5
Answer (a,b,c,d)					

كلية الحاسبات والمعلومات جامعة المنصورة
اختبار منتصف الفصل - مادة
Software Testing and Quality Assurance

بيانات الطالب : برجاء كتابة البيانات التالية

اسم الطالب (رباعي باللغة العربية)	
رقم الطالب Student ID (من كارنيه الكلية)	
رقم السكشن	
اسم البرنامج (ضع علامة صح على برنامجك)	☐ هندسة برمجيات ☐ ذكاء اصطناعي

تعليمات : برجاء قراءة الأسئلة جيداً ثم كتابة الحرف الممثل لكل إجابة في جدول الإجابات في نهاية الصفحة

Model - 5

أولاً - الأسئلة

1. Unit testing is a _____ box testing
    A) Black
    B) White
    C) Green

2. _____ occurs when data is written into a **buffer** (like array) **after** its end.
    A) OS injection
    B) Buffer Overflow
    C) Resource Buffer

3. A _____ is a situation when there are objects present in the **heap** that are **no longer** used, but the **garbage collector** is **unable** to remove them from memory
    A) Memory Leak
    B) volatilizing
    C) Profiler

4. When **Customization index** value is **0.5** , then _____ application **pages** are **dynamic.**
    A) none of
    B) All
    C) half

5. It's better to use _____ **session** management for applications that handle **sensitive/secret** data, such as financial or medical information
    A) Server
    B) Client
    C) Injection

ثانياً - إجابات الطالب

برجاء كتابة الحرف الممثل للإجابة التي تود اختيارها تحت رقم السؤال

Question	1	2	3	4	5
Answer (a,b,c,d)					

Model - 6

اولاً ـ الأسئلة

1. _____ occurs when data is written into a **buffer** (like array) **after** its end.
   A) OS injection   B) Buffer Overflow   C) Resource Buffer

2. It's better to use _____ **session** management for applications that need performance enhancement and **don't** handle **sensitive/secret** data
   A) Server   B) Client   C) Injection

3. Unit testing is a _____ box testing
   A) Black   B) White   C) Green

4. A _____ is a situation when there are objects present in the **heap** that are **no longer** used, but the **garbage collector** is **unable** to remove them from memory
   A) Memory Leak   B) volatilizing   C) Profiler

5. When **Customization index** value is **0.5** , then _____ application **pages** are **dynamic.**
   A) none of   B) All   C) half
