

1. Using == instead of === in JavaScript may cause:

- a) Type conversion issues
- b) Runtime crash
- c) Memory leak

2. The number of maturity levels in CMM is:

- a) Five
- b) Four
- c) Six

3. SQL Injection is mainly caused by:

- a) Insufficient input validation
- b) Syntax errors
- c) Hardware failure

4. LOC is classified as:

- a) Size-oriented metric
- b) Function-oriented metric
- c) Quality metric

5. Infinite recursion happens when:

- a) Recursive stop condition fails
- b) Loop condition is missing
- c) Variable type mismatch

6. Function Point (FP) metrics are:

- a) Language independent
- b) Based on LOC
- c) Used only after coding

7. CMM is mainly used to evaluate:

- a) Software processes

- b) Hardware performance
- c) Network speed

8. Accessing array elements outside bounds leads to:

- a) Memory access error
- b) Syntax error
- c) Compilation error

9. Key Process Areas (KPAs) mainly help in:

- a) Management control
- b) Code generation
- c) UI design

10. A flaw uncovered after delivery to the end-user is called:

- a) Defect
- b) Error
- c) Mistake

11. Mean Time To Change (MTTC) measures:

- a) Maintainability
- b) Usability
- c) Correctness

12. Continuous process improvement is the key focus of:

- a) Optimizing
- b) Initial
- c) Repeatable

13. Using == instead of equals() in Java leads to:

- a) Object comparison mistake
- b) Syntax error
- c) Compilation failure

14. Defect Removal Efficiency (DRE) can be used at:

- a) Project and process level
- b) Coding level only
- c) Testing level only

15. Errors per KLOC is an example of:

- a) Size-oriented metric
- b) Object-oriented metric
- c) Use-case metric

16. Creating unlimited resources may lead to:

- a) Resource exhaustion
- b) Faster execution
- c) Better performance

17. Which CMM level is characterized by ad hoc activities?

- a) Initial
- b) Repeatable
- c) Defined

18. A buffer overflow occurs when:

- a) Writing past buffer limits
- b) Memory is freed early
- c) Variable is uninitialized

19. The integrity metric depends on:

- a) Threat and security
- b) Cost and effort
- c) Size and time

20. Integer overflow occurs when:

- a) Value exceeds storage capacity

- b) Variable is not initialized
- c) Loop never ends

21. Direct software measures include:

- a) Cost and effort
- b) Quality and complexity
- c) Usability and integrity

22. Dereferencing a null reference causes:

- a) Null pointer error
- b) Logic error
- c) Syntax error

23. Well-defined and documented processes appear in CMM level:

- a) Defined
- b) Managed
- c) Initial

24. Debugging is the process of:

- a) Locating and fixing bugs
- b) Writing test cases
- c) Measuring quality

25. Use-case oriented metrics are:

- a) Independent of programming language
- b) Based on lines of code only
- c) Related to compiler type

26. Indirect software measures include:

- a) Quality
- b) LOC
- c) Cost

27. A flaw uncovered before software delivery is called:

- a) Error
- b) Defect
- c) Failure

28. FP computation depends mainly on:

- a) Information domain and complexity
- b) Programmer experience
- c) Execution speed

29. Quantitative process control is a feature of:

- a) Managed
- b) Repeatable
- c) Defined

30. Local variables are usually stored in:

- a) Stack
- b) Heap
- c) Register

31. OS Command Injection happens when:

- a) User input is executed by OS
- b) Database connection fails
- c) Memory is leaked

32. Reference types store their data mainly in:

- a) Heap
- b) Stack
- c) Cache

33. Correctness is commonly measured using:

- a) Defects per KLOC

- b) Mean Time To Change
- c) Threat level

34. One disadvantage of LOC is that it is:

- a) Language dependent
- b) Easy to measure
- c) Widely used

35. At which CMM level are processes planned and tracked?

- a) Repeatable
- b) Initial
- c) Optimizing

36. DRE is calculated using:

- a) Errors and defects
- b) LOC and FP
- c) Time and cost

37. Which of the following is an object-oriented metric?

- a) Number of key classes
- b) Errors per KLOC
- c) Pages per KLOC

38. A major problem with use-case metrics is:

- a) No standard size for a use-case
- b) Language dependency
- c) High cost

39. Infinite loops occur when:

- a) Termination condition never happens
- b) Variable is null
- c) Array index is wrong

40. The number of maturity levels in CMM is:

- **a) Five**
- **b) Four**
- **c) Six**
