

Lec3

1. (Slide 3)

The term “software evolution” was first used by:

- A) Halpern
 - B) Lehman
 - C) Bennett
 - D) Rajlich
-

2. (Slide 4)

Software maintenance is mainly concerned with:

- A) Improving system
 - B) Preserving system
 - C) Redesigning system
 - D) Replacing system
-

3. (Slide 5)

Process improvement approach focuses on:

- A) Why systems evolve
 - B) Scientific analysis
 - C) Engineering solutions
 - D) Historical study
-

4. (Slide 6)

In SPE taxonomy, E-type programs are:

- A) Fully specified
 - B) Mathematical
 - C) Static
 - D) Real-world embedded
-

5. (Slide 7)

Correctness is the main acceptance criteria for:

- A) S-type
- B) P-type
- C) E-type
- D) Hybrid

6. (Slide 8)

P-type programs are based on:

- A) Complete specification
 - B) Abstract problem
 - C) Real-time system
 - D) Fixed logic
-

7. (Slide 9)

A key feature of E-type programs:

- A) Predictability
 - B) Isolation
 - C) Feedback system
 - D) Stability
-

8. (Slide 11)

Lehman laws are mainly applied to:

- A) S-type
 - B) P-type
 - C) Static systems
 - D) E-type
-

9. (Slide 13)

Continuing change indicates:

- A) No updates needed
 - B) Continuous adaptation
 - C) Stable system
 - D) Static domain
-

10. (Slide 14)

Increasing complexity occurs because:

- A) System simplification
 - B) Code removal
 - C) Continuous changes
 - D) Reduced features
-

11. (Slide 14)

To reduce complexity, we use:

- A) Testing
 - B) Deployment
 - C) Documentation
 - D) Preventive maintenance
-

12. (Slide 16)

Self-regulation means:

- A) External control
 - B) Random process
 - C) Internal system control
 - D) No change
-

13. (Slide 18)

Organizational stability implies:

- A) Increasing effort
 - B) Constant activity rate
 - C) No updates
 - D) Random changes
-

14. (Slide 19)

Conservation of familiarity means:

- A) Large changes
 - B) No features
 - C) Stable understanding
 - D) System freeze
-

15. (Slide 21)

Continuing growth ensures:

- A) Reduced functionality
 - B) System removal
 - C) Increasing features
 - D) Stability
-

16. (Slide 23)

Declining quality is mainly due to:

- A) Testing
 - B) Refactoring
 - C) Stability
 - D) Entropy
-

17. (Slide 23)

Entropy in software means:

- A) Order
 - B) Stability
 - C) Disorder increase
 - D) Testing
-

18. (Slide 25)

Software process aging affects:

- A) Code structure
 - B) Performance
 - C) Documentation
 - D) Design
-

19. (Slide 26)

Poor lexicon refers to:

- A) Strong naming
 - B) Clear identifiers
 - C) Meaningful structure
 - D) Weak naming
-

20. (Slide 26)

Coupling refers to:

- A) Independence
 - B) Isolation
 - C) Strong connection
 - D) Simplicity
-

21. (Slide 27)

Code decay leads to:

- A) Easier changes
 - B) Faster updates
 - C) Difficult modification
 - D) Better quality
-

22. (Slide 29)

Empirical studies confirmed:

- A) Random growth
 - B) Static systems
 - C) Linear/inverse-square growth
 - D) No evolution
-

23. (Slide 31)

FEAST project studied:

- A) Security
 - B) Evolution
 - C) Testing
 - D) Design
-

24. (Slide 33)

FOSS movement is linked to:

- A) Torvalds
 - B) Lehman
 - C) Stallman
 - D) Bennett
-

25. (Slide 34)

Linux is an example of:

- A) CSS
 - B) Proprietary
 - C) Closed system
 - D) FOSS
-

26. (Slide 37)

COTS components are:

- A) Custom-built
 - B) Pre-developed
 - C) Temporary
 - D) Dynamic
-

27. (Slide 38)

COTS components are typically:

- A) White-box
 - B) Transparent
 - C) Black-box
 - D) Editable
-

28. (Slide 39)

Wrapper is used to:

- A) Delete components
 - B) Isolate components
 - C) Test components
 - D) Design UI
-

29. (Slide 39)

Tailoring means:

- A) Modify source code
 - B) Remove features
 - C) External enhancement
 - D) Debug system
-

30. (Slide 40)

CBS maintenance difficulty arises from:

- A) Flexibility
 - B) Transparency
 - C) Simplicity
 - D) Frozen functionality
-
-
