

Lec 2

MCQ – Week 02 (Professional Level)

◆ Legacy Systems (Slide 3–5 مهم)

1.

A legacy system is:

- A) A newly developed system
 - B) A system with no value
 - C) An old but valuable system
 - D) A temporary system
-

2.

A legacy system typically:

- A) Is easy to modify
 - B) Has no importance
 - C) Resists modification
 - D) Is always replaced
-

3.

Which is NOT a legacy system strategy?

- A) Freeze
 - B) Outsource
 - C) Wrap
 - D) Compile
-

4.

Wrapping means:

- A) Rewriting system
 - B) Removing system
 - C) Adding a layer around system
 - D) Testing system
-

5.

Migration refers to:

- A) Deleting system
 - B) Changing functionality
 - C) Moving system to new platform
 - D) Stopping system
-
-

◆ Impact Analysis (Slide 7–9 🔥 مهم)

6.

Impact analysis is used to:

- A) Develop software
 - B) Test system
 - C) Estimate effects of change
 - D) Remove bugs
-

7.

Traceability analysis focuses on:

- A) Code execution
 - B) Linking artifacts
 - C) System deletion
 - D) Testing only
-

8.

Dependency analysis focuses on:

- A) UI design
 - B) Hardware
 - C) Code dependencies
 - D) Documentation
-

9.

Ripple effect refers to:

- A) Removing modules
 - B) Effect of change on other parts
 - C) Testing process
 - D) Coding speed
-

10.

Change propagation ensures:

- A) No change
 - B) Partial change
 - C) Change spreads correctly
 - D) Code deletion
-
-

♦ Refactoring (Slide 11 🔥 مهم جدًا)

11.

Refactoring is:

- A) Adding new features
 - B) Changing external behavior
 - C) Improving internal structure
 - D) Deleting code
-

12.

Refactoring must:

- A) Change output
 - B) Preserve behavior
 - C) Remove features
 - D) Increase complexity
-

13.

Refactoring helps in:

- A) Increasing bugs
 - B) Reducing understanding
 - C) Improving maintainability
 - D) Removing testing
-
-

♦ Program Comprehension (Slide 13–16)

14.

Program comprehension is:

- A) Writing code
 - B) Testing code
 - C) Understanding software system
 - D) Deleting system
-

15.

A mental model represents:

- A) Code execution
 - B) Programmer understanding
 - C) Hardware design
 - D) System output
-

16.

Hypotheses are used to:

- A) Delete code
 - B) Test system
 - C) Understand code gradually
 - D) Compile code
-

17.

Bottom-up strategy starts from:

- A) Requirements
 - B) High-level design
 - C) Code level
 - D) Testing
-

18.

Top-down strategy starts from:

- A) Code
 - B) Low level
 - C) High-level goals
 - D) Debugging
-

19.

Chunking refers to:

- A) Deleting modules
 - B) Combining small parts into higher abstraction
 - C) Testing code
 - D) Writing code
-

20.

Cross-referencing means:

- A) Ignoring links
 - B) Linking different abstraction levels
 - C) Deleting data
 - D) Testing system
-
-

- ◆ Software Reuse (Slide 18–23 🔥 مهم جدًا)

21.

Software reuse means:

- A) Writing new code
 - B) Using existing artifacts
 - C) Deleting systems
 - D) Testing software
-

22.

Program families are:

- A) Independent programs
 - B) Programs with common properties
 - C) Random systems
 - D) New applications
-

23.

Domain analysis is:

- A) Coding process
 - B) Testing
 - C) Identifying common domain features
 - D) Debugging
-

24.

Which is a reusable artifact type?

- A) Hardware reuse
 - B) Data reuse
 - C) Network reuse
 - D) Manual reuse
-

25.

Reuse helps in:

- A) Increasing cost
 - B) Reducing productivity
 - C) Improving quality
 - D) Removing testing
-

26.

High cohesion means:

- A) Weak relation
 - B) Strong relation within component
 - C) No relation
 - D) External dependency
-

27.

Loose coupling means:

- A) Strong dependency
 - B) No structure
 - C) Minimal dependency
 - D) Tight integration
-

28.

Reusability requires:

- A) Complexity
 - B) Ambiguity
 - C) Understandability
 - D) Rigidity
-
-

♦ Maintenance Classification (Slide 30–33) 🔥 (مهم جدًا)

29.

Corrective maintenance is:

- A) Proactive
 - B) Reactive
 - C) Preventive
 - D) Adaptive
-

30.

Adaptive maintenance is related to:

- A) Bugs
 - B) Environment changes
 - C) Testing
 - D) Documentation
-

31.

Perfective maintenance focuses on:

- A) Fixing errors
 - B) Improving system
 - C) Removing features
 - D) Deleting code
-

32.

Preventive maintenance aims to:

- A) Fix current bugs
 - B) Prevent future issues
 - C) Improve UI
 - D) Delete system
-
-

♦ Organization & Processes (Slide 48–52) 🔥 (مهم)

33.

SLA is:

- A) Code standard
- B) Contract between client and provider

- C) Testing method
 - D) Programming tool
-

34.

Change approval is done by:

- A) Developer
 - B) User
 - C) Change control board
 - D) Tester
-

35.

Level 3 support includes:

- A) Users
 - B) Help desk
 - C) Programmers
 - D) Managers
-
-

✅ Answer Key (متبصش 😊)

- 1-C
- 2-C
- 3-D
- 4-C
- 5-C
- 6-C
- 7-B
- 8-C
- 9-B
- 10-C
- 11-C
- 12-B
- 13-C
- 14-C
- 15-B
- 16-C
- 17-C
- 18-C
- 19-B

20-B
21-B
22-B
23-C
24-B
25-C
26-B
27-C
28-C
29-B
30-B
31-B
32-B
33-B
34-C
35-C
