

Q1: Choose the correct answer. (40x 1.25 Marks)

- Scrum is iterative, and each iteration is called a sprint.
A. Iteration B. IT1 C. sprint D. meeting
- The initial step in Scrum is for the Product Owner to define the product vision. Over time, this develops into a well-defined and prioritized list of features known as the Product Backlog.
A. Sprint Backlog B. Whiteboard C. Product Backlog D. Design thinking
- Sprint is a time-boxed period dedicated to delivering potentially shippable work.
A. Backlog B. Sprint planning meeting C. Sprint D. Sprint review meeting
- Scrum master is responsible for updating the Product Backlog and ensuring that the user stories are refined.
A. Project manager B. Scrum master C. Development team D. Product owner
- The Scrum framework is a lightweight approach created by Agilitas's to address complex adaptive problems that require sprinting or iterating through a solution.
A. Scrum B. Waterfall C. Sprint D. Agile
- Scrum master is responsible for communicating with stakeholders or users to understand the product vision from them.
A. Scrum master B. Product owner C. Development team D. Tester
- The development team must be self-organizing, cross functional, no sub-teams.
A. self-organizing B. Cross functional C. No sub-teams D. self-organized, cross functional, no sub-teams
- Scrum master is responsible for ensuring that Scrum is understood.
A. Scrum master B. Product owner C. Development team D. tester
- User story is a simple description of a product feature written from the end users' perspective.
A. User story B. Product backlog C. Sprint backlog D. Notes
- The syntax of a user story is:
A. I want to <perform task> As a <user type> so that I can <achieve a goal> B. As a <user type> I want to <perform task> C. As a <user type> I want to <perform task> so that I can <achieve a goal> D. I want to <perform task> As a <user type> so that I can <achieve a goal>
- During the sprint planning meeting, the Scrum Team decides which stories can be committed to the sprint and creates a plan of action to execute.
A. sprint review B. Retrospective C. daily standup D. sprint planning
- Agile is a zizzag and iterative.
A. zigzag B. zigzag and iterative C. iterative D. Sequential
- The three elements of a User Story are:
A. User type, condition, objective B. Role, goal, objective C. User type, task, goal D. Condition, role, task
- Acceptance criteria are simple conditions added to the user story that define what the user story must do.
A. user story B. notes C. Acceptance criteria D. product backlog
- Product owner is responsible for understanding the product vision and communicating back to the team, saying, "I know these items are the most important."
A. Product owner B. Scrum master C. Development team D. Project manager
- Scrum master facilitates the sprint planning meeting, ensuring everyone is invited, the room is reserved, and the time is blocked.
A. Product owner B. Scrum master C. Development team D. Project manager
- In the sprint planning meeting, we must produce a Sprint backlog.
A. User story B. Sprint backlog C. Acceptance criteria D. Documentation
- According to the Agile Principles, deliver value faster is the highest priority.
A. attention to details B. attention to scrums planning C. deliver value faster D. face-to-face conversion
- During the Sprint Planning, the Scrum Team decides What stories can be committed for the sprint and plan of action to execute.
A. What change need to be made to the product backlog. B. What stories can be committed for the sprint and plan of action to execute C. What stories are done - done. D. What didn't go will in pervious iteration
- If the sprint takes 2 weeks, the sprint planning meeting will take 2 hours.
A. 2 B. 3 C. 4 D. 5
- The primary roles in Scrum are:
A. ScrumMaster B. Product Owner C. Team D. Scrum master, product owner, team
- Processes over people does not align with the values of Agile.
A. Processes over people B. Individuals and interactions over Processes and Tools C. Working software over Comprehensive Documentation D. Responding to Change Over Following a Plan

23. The customer requirements are stored in the
~~A. Product backlog~~ B. Sprint backlog C. Database D. GitHub
24. If the sprint takes 1 month, the sprint planning meeting will take ... hours.
 A. 1 B. 4 C. 5 D. 6
25. The reality of any project is
 A. Customers know exactly what they want B. ~~الأسبوع~~ Developers know exactly how to build it. C. Nothing will change along the way D. ~~الأسبوع~~ Developers discover how to build it when they build it
26. If you require it inexpensively and quickly, you would make it
~~A. not good~~ B. good C. scaled D. not scaled
27. The project management phase that project manager can identify all project tasks and estimate the completion time and cost of each.
 A. Planning B. ~~الأسبوع~~ Scheduling C. Monitoring D. Reporting
28. A entails breaking down a project into a series of smaller tasks.
~~A. WBS~~ B. Pert/CPM C. Burn down D. Fishbone
29. Programmers will utilize it to convert the logical design into program modules and code.
~~A. UML~~ B. Use Case Diagram C. application architecture D. Sequence diagram
30. waterfall model can be used over Scrum when
~~A. client needs are well defined and simple~~ B. requirements are subjected to be changed C. a project is not explained properly D. product owner didn't know what are user's requirement
31. Agile was created because of the major downsides of this methodology
 A. spiral B. iterative C. scrum D. ~~waterfall~~
32. If you need it to be of high quality and delivered quickly, you would make it
 A. scaled B. cheap C. ~~expensive~~ D. not scaled
33. create strategic plans to establish the company's overarching mission and goals.
~~A. Top Managers~~ B. Operational C. Middle Managers D. Users
34. In O-O design, Objects possess characteristics called, which the object inherits from its class or possesses on its own and built-in processes called can change an object's properties.
 A. properties, properties B. methods, methods C. ~~properties, methods~~ D. methods, properties
35. If you require it to be both of high quality and inexpensive, you would make it
~~A. not fast~~ B. fast C. scaled D. not scaled
36. Once the Sprint starts, the team executes on the Sprint Backlog. Scrum does not specify how the team should execute. That is left for the team to decide.
~~A. TRUE~~ B. FALSE
37. An agile approach requires intense interactivity between developers and individual users, and does not begin with an overall objective
 A. TRUE B. ~~FALSE~~
38. in waterfall model when we end a phase we cannot go back and edit it again
~~A. TRUE~~ B. FALSE
39. JAD is more expensive and can be cumbersome if the group is too large relative to the size of the project.
~~A. TRUE~~ B. FALSE
40. TOGAF, developed by the Open Group, assists businesses in aligning IT goals with overall business objectives and facilitates the organization of cross-departmental IT efforts.
~~A. TRUE~~ B. FALSE

work breakdown structure

Q2. Write High light About the Following: - (5x 2 Marks)

A. Zachman Framework.

B. FDD.

C. BPMN.

D. UML.

E. Personas.

Zachman Framework

The Zachman Framework is a logical structure designed to provide a comprehensive representation of an enterprise's information infrastructure. It is often visualized as a two-dimensional classification schema (a 6x6 matrix) that looks at an enterprise from different perspectives (What, How, Where, Who, When, Why) and various roles (Planner, Owner, Designer, Builder, etc.).

2. FDD (Feature Driven Development)

FDD is an iterative and incremental software development process that is part of the Agile family. It focuses on delivering functional "features" of the software. The process typically follows five main steps: Develop an Overall Model (Building the big picture). Build a Features List (Grouping functions into small, client-valued pieces). Plan by Feature (Scheduling the work). Design by Feature. Build by Feature.

3. BPMN (Business Process Model and Notation) BPMN is a standard graphical representation for specifying business processes in a workflow. Its primary goal is to provide a notation that is readily understandable by all business stakeholders, from the business analysts who create the drafts to the technical developers responsible for implementing the technology.

4. UML (Unified Modeling Language),

UML is a standardized modeling language used to visualize, specify, construct, and document the artifacts of a software system. It is particularly used in Object-Oriented (O-O) design to map out system structures and behaviors through diagrams like Class Diagrams, Use Case Diagrams, and Sequence Diagrams

5. Personas In Agile and User Experience (UX) design, Personas are fictional characters created to represent the different user types within your targeted demographic. They help the team understand the user's needs, experiences, behaviors, and goals. They are essential for writing effective User Stories, as they define the "Who" in the syntax: "As a <user type

End of Exam Good Luck
