

Lecture 1 – 30 MCQs (Dr.-Style)

1. Web Engineering is primarily concerned with the application of _____ approaches.

- A) Informal
- B) Systematic and quantifiable
- C) Artistic
- D) Intuitive

Answer: B

2. Which textbook is prescribed for the Web Applications Engineering course?

- A) Software Engineering by Sommerville
- B) Web Engineering by Pressman and Lowe
- C) Engineering Software Products
- D) Web Development Essentials

Answer: B

3. Traditional software development projects are mostly classified as _____.

- A) Successful
- B) Failed
- C) Challenged
- D) Perfect

Answer: C

4. The percentage of successful traditional software projects is approximately:

- A) 21%
- B) 37%
- C) 42%
- D) 58%

Answer: A

5. Which of the following is NOT listed as a software development mistake?

- A) Vague project estimates
- B) Skipping product testing
- C) Strong documentation
- D) Misunderstanding requirements

Answer: C

6. Focusing on price rather than value and quality leads to:

- A) Better design
- B) Faster delivery
- C) Regretful decisions
- D) Improved testing

Answer: C

7. Software Engineering is defined as the application of:

- A) Art and intuition
- B) Science and mathematics
- C) Business strategies
- D) Web technologies

Answer: B

8. Web Engineering emphasizes _____ requirements analysis.

- A) Costly
- B) Informal

- C) Cost-effective
- D) Artistic

Answer: C

9. In the early days of the Web, systems were built using all EXCEPT:

- A) Informality
- B) Urgency
- C) Formal documentation
- D) Intuition

Answer: C

10. As WebApps become larger and more complex, informality:

- A) Is eliminated
- B) Increases
- C) Remains with planning
- D) Becomes mandatory

Answer: C

11. Intuition in large WebApps must be augmented by:

- A) More urgency
- B) Proven management and technical patterns
- C) Artistic design
- D) Faster coding

Answer: B

12. The response to problems of old-school web development is:

- A) Waterfall model
- B) Agile development
- C) Web Engineering
- D) Rapid prototyping

Answer: C

13. The Web is described as an _____ technology.

- A) Optional
- B) Indispensable
- C) Limited
- D) Temporary

Answer: B

14. A transformative technology changes:

- A) Hardware only
- B) Programming languages
- C) The way we do things
- D) Project budgets

Answer: C

15. An intranet is intended for:

- A) The public
- B) External partners
- C) Insiders
- D) Customers

Answer: C

16. An extranet allows controlled access to:

- A) Employees only
- B) Insiders
- C) Specific outsiders
- D) Administrators

Answer: C

17. Network intensiveness means that a WebApp:

- A) Works offline
- B) Resides on a network
- C) Has static pages
- D) Avoids servers

Answer: B

18. Concurrency refers to:

- A) Single-user access
- B) Sequential execution
- C) Multiple users accessing simultaneously
- D) Database performance

Answer: C

19. Unpredictable load means:

- A) Fixed number of users
- B) No users
- C) Varying number of users
- D) Scheduled access

Answer: C

20. Users leaving a WebApp due to slow response relates to:

- A) Availability
- B) Performance
- C) Security
- D) Aesthetics

Answer: B

21. “24/7/365” access is associated with:

- A) Performance
- B) Availability
- C) Security
- D) Immediacy

Answer: B

22. WebApps that rely heavily on databases are described as:

- A) Content sensitive
- B) Data driven
- C) Interactive
- D) Transactional

Answer: B

23. WebApps evolve _____ compared to conventional software.

- A) Periodically
- B) Rarely
- C) Continuously
- D) Annually

Answer: C

24. The need to get software to market quickly is called:

- A) Availability
- B) Performance
- C) Immediacy
- D) Concurrency

Answer: C

25. Protecting sensitive content over the web relates to:

- A) Aesthetics
- B) Security
- C) Performance
- D) Availability

Answer: B

26. A WebApp that contains read-only content with simple navigation is:

- A) Download
- B) Informational
- C) Transaction-oriented
- D) Interactive

Answer: B

27. A WebApp that allows file downloads such as PDFs and videos is:

- A) Informational
- B) Customizable
- C) Download
- D) Portal

Answer: C

28. WebApps designed to handle atomic operations ensuring data integrity are:

- A) User Input
- B) Transaction-Oriented
- C) Interactive
- D) Informational

Answer: B

29. A WebApp that aggregates information from multiple sources is:

- A) Service-Oriented
- B) Database Access
- C) Web Portal
- D) Data Driven

Answer: C

30. Data Warehousing WebApps are mainly used for:

- A) Entertainment
- B) Decision-making
- C) File sharing
- D) Social interaction

Answer: B
