

Lectures 9 & 10 – Construction & Deployment

30 MCQs (Dr.'s Exam Style)

1. Construction applies WebE tools and technology to:

- A) Plan the WebApp
- B) Model the WebApp
- C) Construct the WebApp that has been modeled
- D) Deploy the WebApp

Answer: C

2. After construction, a series of _____ tests are conducted.

- A) Formal
- B) Unit
- C) Rapid
- D) Acceptance

Answer: C

3. Rapid tests are intended to uncover errors in all EXCEPT:

- A) Content
- B) Architecture
- C) Navigation
- D) Scheduling

Answer: D

4. Deployment configures the WebApp for its:

- A) Development environment
- B) Operational environment
- C) Testing environment
- D) Modeling environment

Answer: B

5. After deployment, an _____ period commences.

- A) Planning
- B) Testing
- C) Evaluation
- D) Modeling

Answer: C

6. Evaluation feedback is presented to:

- A) Customers only
- B) End users only
- C) The WebE team
- D) Management

Answer: C

7. Construction and deployment often involve:

- A) One execution only
- B) No feedback
- C) A set of iterations between them
- D) Linear execution

Answer: C

8. Development and production environments should be:

- A) Identical
- B) Merged

- C) Separate
- D) Ignored

Answer: C

9. Developers should NOT develop directly on:

- A) Local machines
- B) Test servers
- C) Production servers
- D) Staging servers

Answer: C

10. Testing should be undertaken, if possible, in:

- A) Development environment
- B) Any environment
- C) The same environment users will see
- D) Modeling environment

Answer: C

11. Construction encompasses tasks that lead to a WebApp ready for:

- A) Modeling
- B) Planning
- C) Delivery to end users
- D) Risk analysis

Answer: C

12. Identifying reusable preexisting components is part of:

- A) Coding
- B) Selection
- C) Integration
- D) Refactoring

Answer: B

13. Coding involves:

- A) Only writing new code
- B) Only adapting old code
- C) Adapting existing or creating new components
- D) Database administration only

Answer: C

14. Content management involves all EXCEPT:

- A) Content creation
- B) Database schema implementation
- C) Migration of legacy content
- D) UI navigation testing

Answer: D

15. Authoring focuses on:

- A) Linking code modules
- B) Integrating content with graphic design
- C) Refactoring code
- D) Selecting components

Answer: B

16. Integration links:

- A) Users and servers
- B) Content and requirements
- C) Code, content, and presentation
- D) Design and planning

Answer: C

17. Refactoring is intended to:

- A) Add new features
- B) Improve structure and clarity
- C) Change requirements
- D) Delay testing

Answer: B

18. Testing verifies that components and objects are:

- A) Complete
- B) Optimized
- C) Correct
- D) Deployed

Answer: C

19. Before writing any code, developers should first:

- A) Choose tools
- B) Understand the problem
- C) Deploy the WebApp
- D) Write tests

Answer: B

20. One construction preparation principle is to:

- A) Skip unit tests
- B) Pick any language
- C) Select an environment that makes work easier
- D) Avoid tools

Answer: C

21. Coding principles encourage writing code that is:

- A) Short
- B) Clever
- C) Self-documenting
- D) Complex

Answer: C

22. Algorithms should follow:

- A) Trial-and-error practices
- B) Structured programming practices
- C) Random logic
- D) Minimal testing

Answer: B

23. Content should be treated as:

- A) Software
- B) Temporary data
- C) Publishable material
- D) Test input

Answer: C

24. Deployment encompasses how many actions?

- A) Two
- B) Three
- C) Four
- D) Five

Answer: B

25. Packaging identifies:

- A) All future features
- B) Components to release to production
- C) Risk priorities
- D) User roles

Answer: B

26. Each package-release cycle provides:

- A) Final WebApp
- B) Prototype only
- C) An operational WebApp increment
- D) Design documents

Answer: C

27. Which server provides a mirror of the production environment?

- A) Development server
- B) Test server
- C) Staging server
- D) Local server

Answer: C

28. Comprehensive user testing occurs mainly on:

- A) Production server
- B) Staging server
- C) Development server
- D) Local machine

Answer: B

29. Deployment Principle 2 states that:

- A) Buggy apps should be released early
- B) Delivery should be rushed

- C) A complete delivery package should be assembled and tested
- D) Testing is optional

Answer: C

30. Content Management Systems are primarily:

- A) Design tools
- B) Testing tools
- C) Change management tools
- D) Coding tools

Answer: C

Dr-Style Final Prediction (Lectures 9 & 10)

Expect **many questions** on:

- Construction tasks (selection, coding, authoring, integration)
- Deployment environments (dev / test / staging / production)
- Deployment principles
- CMS benefits
- “Rapid tests” & “evaluation feedback”
