

Choose the correct answer:

(40 x 1 Marks)

1. The completion of steps in sequential order, one after another. Called _____.
A) Sequence B) Iteration C) Selection D) Mutate
2. A set of DFDs produces a _____ of the system, but the details within those DFDs are documented separately in a data dictionary, which is the second component of structured analysis.
A) physical model B) 4 phase model C) 2 phase model D) Logical model
3. _____ maintains consistency among a set of DFDs by ensuring that input and output data flows align properly.
A) Balancing B) Structuring C) Leveling D) Flowing
4. _____ is the process of drawing a series of increasingly detailed diagrams, until all functional primitives are identified.
A) Balancing B) Structuring C) Leveling D) Flowing
5. _____ is the process of drawing a series of increasingly detailed diagrams, until all functional primitives are identified.
A) single B) many C) double D) triple
6. When a set of DFDs is created for a system, the processing logic is broken down into smaller units called _____.
A) functional data flow B) functional primitives C) functional work D) data flow
7. The project management phase that project manager can extract and evaluate reports to management, users, and the project team itself.
A) Planning B) Scheduling C) Monitoring D) Reporting
8. The project management phase that project manager can guide, supervise, and coordinate the project team's workload and monitor the progress, evaluate the results, and take corrective action.
A) Planning B) Scheduling C) Monitoring D) Reporting
9. The project management phase that project manager can create of a specific timetable and use Gantt charts and PERT/CPM charts.
A) Planning B) Scheduling C) Monitoring D) Reporting
10. The project management phase that project manager can identify all project tasks and estimate the completion time and cost of each.
A) Planning B) Scheduling C) Monitoring D) Reporting
11. If you need it good and cheap, you would make it _____.
A) not fast B) fast C) scaled D) not scaled
12. If you need it good and fast, you would make it _____.
A) scaled B) Cheap C) expensive D) not scaled
13. If you need it cheap and fast, you would make it _____.
A) not good B) good C) scaled D) not scaled
14. A _____ is someone who is responsible for overseeing all relevant tasks.
A) Tester B) project manager C) Analyst D) Developer
15. _____ methods attempt to develop a system incrementally, by building a series of prototypes and constantly adjusting them to user requirements.
A) Agile B) JAD C) O-O D) RAD
16. _____ is a popular fact-finding technique that brings users into the development process as active participants.
A) RAD B) JAD C) Interview D) observation
17. _____ analysis combines data and the processes that act on the data into things called objects.
A) agile B) Object-oriented C) Structured D) RAD
18. _____ analysis identifies the data flowing into a process, the business rules that transform the data, and the resulting output data flow.
A) agile B) Object-oriented C) Structured D) RAD
19. A _____ is a review of a project team member's work by other members of the team.
A) Structured-Walk through B) unstructured-line C) typical-walk throw D) FDD
20. A complex task pattern is a chain of multiple patterns, if it complete for a project it called a _____.
A) WBS B) Network C) Gantt Chart D) Fishbone
21. A _____ is a horizontal bar figure that represents a set of tasks.
A) WBS B) Per/CPM C) Gantt Chart D) Fishbone
22. A _____ involves breaking a project down into a series of smaller tasks.
A) WBS B) Per/CPM C) Burn down D) Fishbone
23. Effective _____ requires strong communication skills and a sense of what others want and need to know about the project.
A) Planning B) Scheduling C) Monitoring D) Reporting

24. Systems development projects tend to be _____ because you can't control every leg of project.
A) agile B) obsolete C) dynamic D) fast
25. Project management for IT professionals includes all of the above Except _____.
A) Planning B) Scheduling C) Monitoring D) Merging code
26. _____ emphasize interactivity among the phases
A) Spiral model B) Waterfall model C) Parallel model D) All of the above
27. Imagine building a house what is the phase of SDLC an consider starting with a basic idea.
A) Analysis B) Planning C) Implementation D) Design
28. Top Managers develop long-range plans, called _____, which define the company's overall mission and goals.
A) Current Plan B) Business Model Canvas C) Strategic Plan D) Routine Plan
29. People who have an interest in an information system are called _____.
A) Users B) IT Engineers C) Stakeholders D) Manager
30. _____ consists of everything in the physical layer of the information system
A) Hardware B) Software C) People D) Procedures
31. The objective during _____ phase is to maximize return on the IT investment (ROI).
A) Analysis B) Planning C) Support and Security D) Implementation
32. _____ step aims to correct errors and adapt to changes in the environment
A) Analysis B) Maintenance C) Evaluation D) Implementation
33. _____ one of most viable models for SDLC uses various symbols and shapes to represent data flow, processing, and storage
A) State Machine diagram B) Class Diagram C) Use Case D) DFD
34. Structured analysis it focuses on processes that transform data into useful information, structured analysis is called a _____.
A) Process distribution techniques B) process-centered technique.
C) Data driven technique D) Domain-Driven Design
35. _____ tests system concepts and provides an opportunity to examine input, output, and user interfaces before final decisions are made.
A) Modeling B) Case Tools C) Prototype D) Low Fidelity
36. _____ designed to support decision-making by the people associated with the enterprise in the process of attainment of its objectives.
A) BIS B) MIS C) KMS D) CMS
37. The basic operation to get a clear profile is the _____.
A) Business Profile B) BPMN C) BPM D) Fact-Finding
38. _____ is many times greater. Industry observers predict that sales will increase sharply as more firms seek to improve efficiency and reduce costs.
A) C2C B) B2B C) B2C D) None of them
39. It is a problem-solving technique that improves the system and ensures that all the components of the system work efficiently to accomplish their purpose.
A) Implementation B) Design C) Analysis D) Planning
40. What are the right words you can use at the analysis phase? _____.
A) Implementation and testing B) Understanding and Specifying
C) Prototyping and Wireframing D) Securing and Maintaining

1. In waterfall model when we end a phase we can not go back and edit it again
2. agile methods typically use a spiral model, which represents a series of iterations, or revisions, based on user feedback.
3. Once the Sprint starts, the team executes on the Sprint Backlog. Scrum does not specify how the team should execute. That is left for the team to decide .
4. In Sprint Planning, the team chooses the backlog items they will work on in the upcoming sprint.
5. The Product Backlog is a prioritized list of value the team can deliver. The Product Owner owns the backlog and adds, changes, and reprioritizes as needed.
6. Only one Sprint is planned at a time
7. RAD helps a development team design a system that requires a highly interactive or complex user interface.
8. RAD stresses the mechanics of the system itself and does not emphasize the company's strategic business needs. A system might work well in the short term.
9. JAD allows key users to participate effectively in the requirements modeling process.
10. JAD is more expensive and can be cumbersome if the group is too large relative to the size of the project
11. When you design the DFD Use unique names within each set of symbols
12. A DFD shows only External entity that provide data to the system or receive output from the system.
13. A logical model shows what the system must do, regardless of how it will be implemented physically.
14. Questionnaire also called a survey, is a document containing a number of standard questions that can be sent to many individuals.
15. Range of Responses questions is to ask the person for evaluating something by providing limited answers to specific responses or on a numeric scale.
16. The interviewer must avoid the Leading Questions that suggest or favor a particular reply.
17. Preliminary investigation is an important fact-finding tool during the systems analysis phase.is a planned meeting during which the analyst obtains information from another person.
18. TOGAF is created by the Open Group, helps businesses align IT goals with overall business goals, while helping to organize cross-departmental IT efforts.
19. Zachman framework is a matrix and a popular approach to modeling enterprise architectures.
20. fact finding means Collecting Information using interviews or other techniques.
