

Model 1 — Multiple Choice (General Concepts)

1. KNN stands for:

- A) Kernel Neural Network
- B) K-Nearest Neighbors
- C) Known Neuron Network
- D) Key Network Node

2. What does KNN mainly rely on?

- A) Backpropagation
- B) Distance between points
- C) Filters
- D) Loss functions

3. ANN stands for:

- A) Applied Neuron Network
- B) Artificial Neural Network
- C) Automatic Number Network
- D) Advanced Natural Node

4. The basic unit of an ANN is:

- A) Pixel
- B) Neuron
- C) Neighbor
- D) Block

5. CNNs are heavily used in:

- A) Image tasks
- B) Sorting text
- C) Audio recording
- D) Password hashing

6. Sequential model is best for:

- A) Simple layer-by-layer models
- B) Multi-branch networks
- C) Multiple input/output networks
- D) Reinforcement learning

7. Functional API allows:

- A) Only one input
- B) Complex model architectures
- C) Only Dense layers
- D) Only images

8. CNN extracts features using:

- A) Kernels/filters
- B) Loops
- C) Loss functions
- D) Neighbors

9. ANN learns patterns using:

- A) Backpropagation
- B) Euclidean distance
- C) Random guessing
- D) Subtraction

10. KNN works well with:

- A) Small datasets
 - B) Very large datasets
 - C) Only images
 - D) Only audio
-
