

Lecture 4 – 30 MCQs (Dr.'s Style)

1. The primary goal of communication is to:

- A) Start coding quickly
- B) Understand the problem before solving it
- C) Reduce documentation
- D) Eliminate stakeholders

Answer: B

2. Communication in WebE consists of:

- A) Planning, modeling, construction
- B) Formulation, elicitation, negotiation
- C) Design, coding, testing
- D) Analysis, design, deployment

Answer: B

3. Formulation focuses on defining the project:

- A) Schedule
- B) Cost
- C) Needs and scope
- D) Risks

Answer: C

4. Formulation begins with identifying:

- A) Technical constraints
- B) Business need
- C) User interface
- D) Database schema

Answer: B

5. Describing WebApp objectives occurs during:

- A) Negotiation
- B) Elicitation
- C) Formulation
- D) Planning

Answer: C

6. Establishing a common set of goals between stakeholders and the WebE team is part of:

- A) Planning
- B) Modeling
- C) Formulation
- D) Deployment

Answer: C

7. Formulation establishes a basis for which action?

- A) Planning
- B) Construction
- C) Elicitation
- D) Deployment

Answer: C

8. Which question is asked during formulation?

- A) How will the system be coded?
- B) What is the main business motivation?
- C) How many test cases exist?
- D) What tools will be used?

Answer: B

9. Each stakeholder:

- A) Has the same view of the WebApp
- B) Has different benefits and risks
- C) Only focuses on cost
- D) Has identical objectives

Answer: B

10. The intent of elicitation is to:

- A) Resolve conflicts
- B) Gather detailed requirements collaboratively
- C) Write code
- D) Deploy the WebApp

Answer: B

11. Elicitation meetings are attended by:

- A) Developers only
- B) Customers only
- C) All stakeholders
- D) Project managers only

Answer: C

12. Who controls the elicitation meeting?

- A) Project manager only
- B) Customer only
- C) Facilitator
- D) Tester

Answer: C

13. A facilitator can be:

- A) A Web engineer
- B) A customer
- C) An outsider
- D) All of the above

Answer: D

14. Which of the following can be used as a definition mechanism?

- A) UML diagrams
- B) Wall stickers
- C) Source code
- D) Test cases

Answer: B

15. One elicitation task is to:

- A) Perform risk analysis
- B) Define user categories
- C) Create database tables
- D) Deploy increment

Answer: B

16. Writing user scenarios is part of:

- A) Formulation
- B) Elicitation
- C) Negotiation
- D) Planning

Answer: B

17. Internal constraints are best understood by considering:

- A) Business rules
- B) User behavior
- C) Technical and project environment
- D) Government regulations

Answer: C

18. External constraints are enumerated by considering:

- A) Programming tools
- B) Development hardware
- C) Business and usage environment
- D) Staff skill levels

Answer: C

19. Which of the following is an external constraint?

- A) Available WebE tools
- B) Browser compatibility
- C) Privacy issues
- D) Development hardware

Answer: C

20. Use cases describe how:

- A) Code is executed
- B) Databases are accessed
- C) A user interacts with the WebApp
- D) Servers communicate

Answer: C

21. A user in a use case is called a(n):

- A) Client
- B) Visitor

- C) Actor
- D) Stakeholder

Answer: C

22. Use cases are developed:

- A) Once
- B) Only at the start
- C) Iteratively
- D) After deployment

Answer: C

23. Only use cases necessary for the increment are developed during:

- A) Planning
- B) Construction
- C) Communication
- D) Deployment

Answer: C

24. Use cases help to:

- A) Eliminate testing
- B) Organize work into increments
- C) Reduce stakeholders
- D) Avoid negotiation

Answer: B

25. Each use-case card contains all EXCEPT:

- A) Name
- B) Brief description
- C) Effort indicator
- D) Source code

Answer: D

26. The effort indicator usually ranges between:

- A) 0 and 10
- B) 1 and 4
- C) 1 and 100
- D) 5 and 10

Answer: B

27. The grouping of cards is constrained by:

- A) Cost minimum
- B) Time delay
- C) Effort maximum M
- D) Number of users

Answer: C

28. Negotiation is required because requirements are often:

- A) Complete
- B) Stable
- C) Contradictory or infeasible
- D) Perfect

Answer: C

29. Negotiation balances functionality and performance against:

- A) Security and usability
- B) Cost and delivery time
- C) Design and testing
- D) Tools and technology

Answer: B

30. A key principle of good negotiation is:

- A) Winning at all costs
- B) Avoiding compromise
- C) Achieving a win-win result
- D) Enforcing strict positions

Answer: C

Dr. Final Prediction

From Lecture 4, **expect many questions** on:

- Formulation vs Elicitation vs Negotiation
- Internal vs External constraints
- Use cases & actors
- Effort indicators & increments
