

Data Mining – Lecture 12 – Data mining Trends IS422P

Note : “ I don't really know if we will get questions related to some trends , but just take study the lecture ☹ “

1- What does Business Intelligence (BI) refer to?

- a- The process of extracting and visualizing data
- b- The procedural and technical infrastructure that collects, stores, and analyzes the data produced by a company's activities
- c- The analysis of web data to identify patterns
- d- The use of machine learning to adapt behavior for future incidents

Answer : b.

2- Which of the following is NOT a component of Business Intelligence (BI)?

- a- Data mining
- b- Process analysis
- c- Performance benchmarking
- d- Natural Language Processing (NLP)

Answer : d.

3- Which of the following best describes Big Data?

- a- Data that can be easily visualized
- b- A huge volume of structured, semi-structured, and unstructured data
- c- Data used specifically for business intelligence
- d- Only structured data collected by a company

Answer : b.

4- Which of the 5 Vs of Big Data refers to the amount of data?

- a- Variety
- b- Velocity
- c- Volume
- d- Veracity

Answer : c.

5- In the context of Big Data, what does "Veracity" refer to?

- a- The speed at which data is growing
- b- The uncertainty of data
- c- The types of data
- d- The value derived from data

Answer : b.

6- Which characteristic of Big Data refers to the fast rate at which data is generated?

- a- Volume
- b- Variety
- c- Velocity

Answer : c.

Data Mining – Lecture 12 – Data mining Trends IS422P

7- How does machine learning differ from data mining?

- a- Machine learning can automatically adapt behavior for future incidents
- b- Data mining can learn and apply knowledge on its own
- c- Machine learning does not involve human interaction
- d- Data mining looks at patterns and adapts over time

Answer : a.

8- Web mining is a type of data mining limited to web related data .

- a- True
- b- False

Answer : a.

9- What does web structure mining analyze?

- a- User's web activity through application logs
- b- Content and patterns within web documents
- c- Data from hyperlinks to discover patterns
- d- Statistical models to represent web data

Answer : c.

10- Which type of web mining focuses on analyzing user activity through application logs?

- a- Web content mining
- b- Web structure mining
- c- Web usage mining
- d- Web pattern mining

Answer : c.

11- Which of the following is a function of a data warehouse?

- a- Extracting insights from unstructured data
- b- Storing essential data from multiple sources under a single schema
- c- Visualizing data using charts and graphs
- d- Real-time data processing

Answer : b.

12- Data warehouse data are stored under multiple schemas .

- a- True
- b- False

Answer : b, ☺

13- Data mining is usually performed on structured data.

- a- True
- b- False

Answer : a.

Data Mining – Lecture 12 – Data mining Trends IS422P

14- Which technique is used to understand the underlying meaning of text data?

- a- Text mining
- b- Data warehousing
- c- Data visualization
- d- Natural Language Processing (NLP)

Answer : d.

15- Which type of chart is used to show numerical comparisons between categories?

- a- Line chart
- b- Pie chart
- c- Column chart
- d- Bubble chart

Answer : c.

16- What does a scatter plot show?

- a- The change of data over a continuous time interval
- b- The distribution of data based on a five-number summary
- c- The relationship between two variables as points on a rectangular coordinate system
- d- The timing of a mission or project

Answer : c.

17- Which type of chart displays a series of steps and the completion rate for each step?

- a- Line chart
- b- Funnel chart
- c- Area chart
- d- Gantt chart

Answer : b.

18- Which type of chart is used to show how data changes over a continuous time interval?

- a- Pie chart
- b- Bubble chart
- c- Line chart
- d- Bar chart

Answer : c.

19- Which type of chart shows the timing of a mission or project?

- a- Box plot
- b- Column chart
- c- Gantt chart
- d- Heatmap

Answer : c.

Data Mining – Lecture 12 – Data mining Trends IS422P

20- Which type of chart is used to display the relationship between two measures using colors?

- a- Pie chart
- b- Line chart
- c- Heatmap
- d- Scatter plot

Answer : c.

21- Which statement about data mining and data analysis is true?

- a- Data mining is always accompanied by visualization of results
- b- Data analysis can be done on structured, semi-structured, or unstructured data
- c- Data mining involves visualization tools
- d- Data analysis is limited to structured data

Answer : b , 😊 مكانه غلط ؟

موفقین ان شاء الله

"شکرا لكم ولا تنسوننا بالدعاء"
