

Data Mining – Lecture 3

1-Low quality data will lead to low quality mining results .

- a- True
- b- False

Answer : a.

2- ____ is a factor of data quality .

- a- Accuracy
- b- Completeness
- c- Consistency
- d- All above

Answer : d.

3- Lack of due to faulty instruments , errors caused by human/computer or transmission errors is related to ____.

- a- Accuracy
- b- Completeness
- c- Consistency
- d- Believability

Answer : a.

4-Data ____ is a major preprocessing task that improves quality of data.

- a- Cleaning
- b- Integration
- c- Reduction
- d- All above

Answer : d.

5- Including data from multiple sources in your analysis is related to data ____ .

- a- Cleaning
- b- Integration
- c- Reduction
- d- Discretization

Answer : b.

6- Missing and unapplicable values are the same .

- a- True
- b- False

Answer : b .

Data Mining – Lecture 3

- 7- Data is inconsistent when its contains discrepancies in codes or names .
- a- True
 - b- False

Answer : a.

- 8- A missing value may not imply an error in the data always .
- a- True
 - b- False

Answer : a.

- 9- Some of the ways for data cleaning ____ .
- a- Filling missing values
 - b- Smoothing out noise while identifying outliers
 - c- Correcting inconsistencies in the data
 - d- All above

Answer : d.

- 10- _____ , is time consuming , not feasible for large data set.
- a- Ignore the tuples
 - b- Fill in the missing value manually
 - c- Use a global constant
 - d- Using mean or median

Answer : b, note (“ here the question is related to data cleaning missing values ways “)

- 10- _____ is to replace all missing attribute values by the same value .
- a- Ignore the tuples
 - b- Fill in the missing value manually
 - c- Use a global constant
 - d- Using mean or median

Answer : c.

- 11- When using the most probable value , we use regression , inference based tools such as ____.
- a- Bayesian formula
 - b- Decision tree
 - c- Both
 - d- None

Answer : c.

- 12- _____ is a random error or variance in a measured variable.
- a- Noise
 - b- Outlier
 - c- None
 - d- Both

Answer : a.

Data Mining – Lecture 3

13- ____ is a data smoothing technique.

- a- Binning
- b- Regression
- c- Outlier analysis
- d- All above

Answer : d , note (they're ways to fix the noise “)

14- Binning is related to smooth unsorted data value by consulting its neighborhood.

- a- True
- b- False

Answer : b, explanation “ sorted data “

Smoothing by bin means → each bin value is replaced by the bin mean

Smoothing by bin medians → each bin value is replaced by the bin median

Smoothing by bin boundaries → each bin value is replaced by the closest boundary value (min & max in a bin are bin boundaries)

Note (in the exam , the question must identify the bins and the smoothing way)

15- Potter's wheel is an automated interactive data cleaning tool.

- a- True
- b- False

Answer : a.

" شكرا لكم ولا تنسونا بالدعاء "
