

Data Mining Midterm

➤ **This file includes midterm questions**

1- Reducing the number of attributes to solve the high dimensionality problem is called as

- a. Cleaning
- b. Overfitting
- c. Dimensionality
- d. Dimensionality reduction**

2- The support for the rule $\{X\} \rightarrow \{Y\}$ was determined to be 0.90. What does the value 0.90 mean?

- a. 90% of customers who buy X also buy Y
- b. 90% of customers who buy Y also buy X
- c. 90% of customers buy X and Y**
- d. 90% of customers who buy X don't buy Y

3- In the binary attribute , if one state is more valuable and has weight than the other , it's called

- a. symmetric
- b. asymmetric**
- c. discrete
- d. unknown

4- If you need to find frequent items , you will use

- a. k-means
- b. K-nearest neighbor

c. FP-Growth

d. DBSCAN

5-What kind of attribute will you use to define the temperature values ?

a. interval scaled

b. ratio scaled

c. nominal

d. binary

6- If all the proper subsets of an itemset are frequent , then the itemset itself.....

a. must also be frequent

b. may be frequent

c. must be infrequent

d. is strong

7- The probability that two items are brought together is known as

a. correlation

b. support

c. lift

d. confidence

8- is the correlation analysis measure for nominal attributes

a. covariance

b. chi-square

c. lift

d. correlation coefficient

9- The bottleneck of the Apriori algorithm is caused by

a. No.of rule

b. Min. Confidence

c. No.of candidate

d. Correlation

10- This data transformation technique works well when min and max values for real-valued attribute are known as normalization

a. z-score

b. min-max

c. decimal scaling

d. logarithmic

11- Removing noise and inconsistent data refers to which phase of the knowledge discovery process

a. data integration

b. data cleaning

c. data transformation

d. data selection

12- During the knowledge discovery process , you should identify truly interesting patterns using appropriate methods through the Phase

a. pattern evaluation

b. data mining

c. data selection

d. data integration

13- If the mean > median the data is

a. positively skewed

b. negatively skewed

- c. symmetric
- d. correlated

14- Concept Hierarchy is used to

- a. data cleaning
- b. data integration
- c. data reduction
- d. data discretization

15- If the confidence of the rule $<$ the min-confidence this means the rules is

- a. frequent
- b. correlated
- c. strong
- d. not strong

16 – What kind of attribute will you use to define the telephone number ?

- a. Interval scaled
- b. ratio scaled
- c. discrete
- d. nominal

17- If the mean $<$ median the data is

- a. positively skewed
- b. negatively skewed
- c. symmetric
- d. correlated

18- Parametric data reduction strategies include

- a. Histograms

b. Regression

c. Clustering

d. Sampling

19- If you want to give all attributes an equal weight , which preprocess task will you use

a. Cleaning

b. Integration

c. Transformation

d. Reduction

20- If the value of the lift measure of A and C = 1.5 then the item A and C are

a. positive correlated

b. negative correlated

c. independent

d. frequent
