

Data Mining – Lecture 1

Note (“ It’s an intro about data mining basically , to gain a really clear vision about data mining , please watch the first lecture “)

1- _____ is an extraction of interesting ,non trivial , implicit ,previously unknown and potentially useful patterns or knowledge from huge amount of data .

- a- Data base
- b- Data mining
- c- Data structure
- d- None

Answer : b.

Note (“ the output of Data mining is not data but Knowledge “) ;

2- _____ is an Alternative name for Data mining .

- a- KDD (“Knowledge Discovery in Databases “)
- b- Knowledge extraction
- c- Information harvesting
- d- All above

Answer : d.

3- Data analysis is type of data mining as well .

- a- True
- b- False

Answer :b , explanation “ DA related to data but it’s not about mining “

Note (“ Not everything related to data is a data mining even if the output is Knowledge “)

4- Any data could be used in Data mining .

- a- True
- b- False

Answer : a. examples (“ relational db , data warehouse , transactional databases “)

5- _____ Is a kind of patterns which can be mined.

- a- Generalization
- b- Classification
- c- Cluster analysis
- d- All above

Answer : d.

6-Generalization is related to information integration and data warehouse construction.

- a- True
- b- False

Answer : a.

Data Mining – Lecture 1

7- at Classification , construct models are based on ____.

- a- New data
- b- Training examples
- c- Both
- d- None

Answer :b . note (“ supervised learning “)

8- Cluster analysis ire related to unsupervised learning .

- a- True
- b- False

Answer : a.

9-We could benefit from data mining in ____ .

- a- Web page analysis
- b- Basket data analysis
- c- Biological and medical data analysis
- d- All above

Answer : d.

Note (“ most of the first lecture related to an overview about Data mining , I think if you watch the first lecture ,it will be somehow easier in the upcoming lectures “)

“Thanks ::D “
