

Q.I) Choose the right answers and label them in your answer sheet. (40x1.5)

1.is a choice made between alternative courses of action in a situation of uncertainty.			
A) Decision	B) Decision making	C) Support	D) DSS
2. The decision-making process can be defined as the activity that leads to the solution of a decision-making problem involving at least Alternatives.			
A) One	B) Two	C) Three	D) Four
3. The output of the DSS design phase is set of			
A) Problem statements	B) Solutions	C) Alternatives	D) States of nature
4. If a company has fixed costs of \$100,000, variable costs of \$25 per unit, and a selling price of \$2000 per 40 units, this means that the company must sell units to cover all its costs (BEA).			
A) 1000	B) 4000	C) 5000	D) 10000
5. analysis can summarize the anticipated financial results for a specific period in the future			
A) AHP model	B) Pro forma	C) Break even	D) Ratio
6. measuring performance against the planned objectives and initiating corrective action, if needed.			
A) Planning	B) Leadership	C) Controlling	D) Organizing
7. Decisions are those in which the decision maker must provide judgment, evaluation, and insights into the problem definition			
A) Structured	B) Semi-Structured	C) Unstructured	D) None of them
8. support top managers with conveniently displayed summarized information, customized for them			
A) BI	B) MIS	C) DSS	D) EIS
9. The main objective ofis to facilitate communication between the members of an organization and between the organization and its environment			
A) OIS	B) DSS	C) TPS	D) ERP
10. are systems that employ knowledge about their application domain and use an inferencing (reason) procedure to solve problems that would otherwise require human competence or expertise			
A) Decision support	B) Expert systems	C) Genetics	D) Fuzzy systems
11. helps you to identify all possible causes of the problem			
A) DT	B) ERD	C) Pareto chart	D) Cause and effect
12. models are used to provide answers to what-if situations occurring frequently in an organization			
A) Sensitivity analysis	B) Statistical	C) Forecasting	D) Goal seeking
13. The output of traditional DSS are decisions based on..... date.			
A) Qualitative	B) Quantitative	C) Both a & b	D) none of them
14. Phase of the DSS process consists of choosing among solution alternatives			
A) Intelligence	B) Implementation	C) Choice	D) Design
15.consists of various mathematical and analytical models that are used to analyze complex data.			
A) DSS KB	B) DSS DB	C) DSS SW system	D) DSS UI

16. Decision-making under, the decision-maker does not know, or cannot estimate, the probability of occurrence of the possible outcomes.			
A) Certainty	B) Risk	C) Uncertainty	D) Compress
17.is the increase in the expected profit that would result if one knew with certainty which state of nature would occur.			
A) AHP	B) EV	C) ROMC	D) EVPI
18. A decision problem is characterized by.....			
A) decision alternatives	B) States of nature	C) Payoffs	D) All of them
19. are not under the control of the decision maker, which will ultimately affect decision results.			
A) decision alternatives	B) States of nature	C) Payoffs	D) All of them
20. In AHP, If the CR is greater than the judgments are untrustworthy because they are too close for comfort to randomness and the exercise is valueless or must be repeated.			
A) 0.1	B) 0.01	C) 50%	D) 0.2
21.emphasizes the quantification of individual preferences using utility functions			
A) AHP	B) MAUA	C) DT	D) EVP
22. In the influence diagram,represented by hexagons and represent the objectives of the decision-maker.			
A) Decision nodes	B) Value nodes	C) Chance nodes	D) Output nodes
23.is an organized approach to designing specialized decision support systems, more precisely their user interfaces.			
A) MAUA	B) AHP	C) GUI	D) ROMC
24.is a model driven DSS to help a person decide how much he or she needs to invest each month for retirement			
A) Fidelity	B) Stock finder	C) Microsoft CarPoint	D) TCB Works
25. During phase, you conduct a thorough analysis of the current decision-making processes within the organization.			
A) Feasibility study	B) Initialization	C) Diagnosis	D) Make/Buy
26.is the process of identifying an appropriate model for a prospective model-driven decision support system.			
A) Forecasting	B) Assumptions	C) Modelling	D) Validation
27.is a structured approach for evaluating and assessing the effectiveness, efficiency, and security of a Decision Support System within an organization.			
A) DSS audit plan	B) DSS diagnosis	C) DSS planning	D) DSS evaluation
28.is a rule-based system that provides a solution, usually in one functional area (e.g., finance, manufacturing), to a specific repetitive managerial problem, usually in one industry.			
A) ADS	B) ES	C) DSS	D) KBS
29.developed at Stanford University in the early 1980s for medical diagnosis, is the most well-known ES application			
A) SONAR	B) LMOS	C) XCON	D) MYCIN
30.is a goal-driven approach in which you start from an expectation of what is going to happen (i.e., hypothesis) and then seek evidence that supports (or contradicts) your expectation.			
A) Forward chaining	B) Backward chaining	C) Reinforcement	D) Supervised DS
31. Pairs of selected individuals (parents) exchange genetic information to create new individuals (offspring) in the..... phase of the genetic algorithm.			
A) Crossover	B) Termination	C) Replacement	D) Mutation

32. According to Table 1, the decision maker will choose, based on an optimistic approach.			
A) A1	B) A2	C) A3	D) A4
33. According to Table 1, the decision maker will choose, based on a pessimistic approach.			
A) A1	B) A2	C) A3	D) A4
34. According to Table 1, the decision maker will choose, based on the regret approach.			
A) A1	B) A2	C) A3	D) A4
35. According to Table 1, the decision maker will choose, based on the Expected value approach. (probabilities of states of nature are equal).			
A) A1	B) A2	C) A3	D) A4
36. According to Table 1, the decision maker will achieve, based on the Expected value approach. (probabilities of states of nature are equal).			
A) 1.75	B) 6.75	C) 8.75	D) 14.5
37. According to Table 1, the EVPI equals.....			
A) 5	B) 14	C) 1.25	D) 7.75
38. According to Table 2, The threshold value (0.5) sets the output Y to 1 in the next row if the weighted sum of inputs is greater than 0.5; otherwise, Y is set to 0, Alpha =0.2, initially w1=0.1, w2=0.3, so the new weights after the second step are			
A) w1=0.1, w2=0.3	B) w1=0.7, w2=0.7	C) w1=0.5, w2=0.7	D) w1=0.3, w2=0.5
39. According to Figure 1, the decision maker will recommend buyingbased on the AHP method.			
A) Escort	B) Miata	C) Civic	D) Saturn
40. According to the choice in question 39, what is the weight of the selected model?			
A) 0.30	B) 0.33	C) 0.35	D) 0.39

Table 1:Profit payoff

		States of nature			
		S1	S2	S3	S4
Alternatives	A1	10	9	14	2
	A2	3	6	2	- 4
	A3	5	4	1	17
	A4	4	2	19	7

Table 2
Inputs

<i>Case</i>				<i>Desired Results</i>
1	0	0	0	
2	0	1	1	1 (positive)
3	1	0	1	1 (positive)
4	1	1	1	1 (positive)

Figure 1

Good Luck.
Dr. Ibrahim El-Hasnony
