

Q.1) Choose the right answers and label them in your answer sheet (B). (10 x 0.5 Marks)

1. The amount of new content in each successive release of a system tends to stay constant or decrease over time.
A. Declining quality B. Continuing growth C. Conservation of familiarity D. Conservation of organizational stability
2. Components refers to the ability to enhance the functionality of a component.
A. Wrapper B. Glue C. Tailoring D. None of them
3. it is important to continually undertake preventive measures tothe entropy by improving the software's overall architecture, high-level and low-level design, and coding.
A. Reduce B. Increase C. None of them
4. It is a piece of code that one builds to isolate the underlying components from other components of the system.
A. Wrapper B. Glue C. Tailoring D. All of them
5. There are types of aging in software lifecycles which is correct.
A. software process execution aging B. software product aging C. All of them D. None of them

6. Which of the following are characteristics of the Software maintenance:
A. Constraints of an existing system B. Shorter time frame C. Available test data D. All of them
7. A maintenance activity may span from a few hours to a few months, whereas software development may span one or more years.
A. Constraints of an existing system B. Shorter time frame C. Available test data D. None of them
8. Software change is a process that may introduce new requirements to the existing system or may need to alter the software system if requirements are not correctly implemented.
A. True B. FALSE
9. It has been decided to replace or eliminate the system entirely, either because the costs of maintaining the old system have become prohibitive or because there is a newer solution waiting in the pipeline.
A. Phase out B. Servicing C. Evolution D. Initial development
10. Software maintenance should have its own Software Maintenance Life Cycle (SMLC) model as it involves many unique activities.
A. True B. FALSE

11. The laws concern what Lehman called systems
A. S-type B. P-type C. E-Type D. None of them
12. is an old system which is valuable for the company which often developed and owns it.
A. Re-engineering B. A legacy system C. Software Configuration Management
D. Impact analysis
13. The symptoms of Aging in software were:
A. Pollution B. Poor lexicon C. Coupling D. All of them
14. In this model, necessary changes are quickly made to the code and then to the accompanying documentation
A. Quick fix model B. Iterative enhancement model C. Full reuse model D. None of them
15. Maintenance is performed on an operational system. Therefore, all modifications must be compatible with the constraints of the existing architecture, design, and code.
A. Constraints of an existing system B. Shorter time frame C. Available test data
D. None of them

16. The system is no longer a key asset for the developers, who concentrate mainly on maintenance tasks rather than architectural or functional change. Knowledge about the system has lessened and the effects of change have become harder to predict. The costs and risks of change have increased significantly.
A. Phase out B. Servicing C. Evolution D. Initial development
17. The objectives of SCM are to :
A. Uniquely identify every version B. Retain past versions C. Provide a trail of audit
D. All of them
18. In software reengineering The word "product items" include
A. Document B. executable software C. source code, hardware, and disks. D. All of them
19. program is one that is embedded in the real world, and it changes as the world does.
A. S-type B. P-type C. E-Type D. None of them
20. Component provides the functionality to combine different components.
A. Wrapper B. Glue C. Tailoring D. None of them

Good Luck.

Dr. Hala Ahmed
